principles of mathematical analysis Passing to vector-valued functions in general, i.e., to functions f which map $[a, b]$ into some \mathbb{R}^k , we may still apply Definition 5.1 to define $f(x)$. The term $\phi(t)$ in (1) is now, for each t , a point in \mathbb{R}^k , and the limit in (2) is taken with respect to the norm of \mathbb{R}^k .

Principles of Mathematical Analysis. (Dedekind's construction is now treated in an appendix to Chapter I.) The topological background needed for the development of convergence, continuity, differentiation and integration is provided in Chapter 2. There is a new section on the gamma function, and many new and interesting exercises are included.

PRINCIPLES OF MATHEMATICAL ANALYSIS. WALTER RUDIN 10. Integration of Differential Forms 1. Let H be a compact convex set in \mathbb{R}^k with nonempty interior. Let $f \in C(H)$, put $f(x) = 0$ in the complement of H , and define $\int_H f$ as in Definition 10.3. Prove that $\int_H f$ is independent of the order in which the integrations are carried out.

Mathematical analysis is the branch of mathematics dealing with limits and related theories, such as differentiation, integration, measure, infinite series, and analytic functions.. These theories are

usually studied in the context of real and complex numbers and functions. Analysis evolved from calculus, which involves the elementary concepts and techniques of analysis.
