UGSI Chemical Feed includes the Polyblend ® mechanical polymer feeders and the DynablenD™ and Dynajet™ hydraulic polymer feeders. Our designs feature two-stage mixing with high energy for the optimum initial wetting followed by a quiescent zone allowing for more gentle activation, as polymer science dictates.

Piranha solution, also known as piranha etch, is a mixture of sulfuric acid (H<sub>2</sub>SO<sub>4</sub>) and hydrogen peroxide (H<sub>2</sub>O<sub>2</sub>), used to clean organic residues off substrates. Because the mixture is a strong oxidizing agent, it will remove most organic matter, and it will also hydroxylate most surfaces (add OH groups), making them highly hydrophilic (water-compatible).

Metrohm AG is a leading provider of instruments and know-how for chemical analysis in the lab and in the process, specializing in titration, ion chromatography, electrochemistry, and spectroscopy.

### **Metrohm AG: Swiss-quality products for chemical analysis**

A chemical plant is an industrial process plant that manufactures (or otherwise processes) chemicals, usually on a large scale. The general objective of a chemical plant is to create new material wealth via the chemical or biological transformation and or separation of materials. Chemical plants use specialized equipment, units, and technology in the manufacturing process.

Lab 3 - Extraction Objective In this experiment, you will separate the components of a commercial headache powder via an extractive process. This separation will be accomplished by taking advantage of the fact that each component contains different functional groups which will react differently when treated with a specific reagent.
